

GenomicsOps Service Level Agreement

Version: 1.0 **Effective:** 2026-10-01 **Applies to:** Commercial licenses for the GenomicsOps desktop application

1. Scope

This agreement covers support and maintenance for the GenomicsOps Windows desktop application. It does not cover:

- Custom development or bespoke integrations
- On-site installation or training
- Modifications to the ACMG engine or reference data
- Third-party software (Docker, Nextflow, Windows, antivirus tools)

2. Support channels

Channel	Address	Coverage
General support	support@genomicsops.io	Business hours
Sales / licensing	sales@genomicsops.io	Business hours
Security reports	security@genomicsops.io	24/7 monitoring

Business hours: Monday to Friday, 09:00 to 18:00 (Iran Standard Time, UTC+3:30). Excludes public holidays.

3. Response times

Time from receipt of a support request to first substantive reply.

Severity	Definition	Target response
Critical	Application cannot start, or data loss	1 business day
High	Core feature broken (annotation, ACMG, reports)	2 business days
Medium	Non-critical feature broken or workaround exists	3 business days
Low	Cosmetic issue, question, or feature request	5 business days

Response time is not resolution time. Complex bugs may require a software update; see Section 5.

4. What's included

For licensed customers during the license term:

- Email support for installation, configuration, and use of the application
- Bug fixes for defects in the ACMG engine, CNV scoring, trio analysis, and reporting, delivered as point releases (0.1.x)
- Access to documentation updates and reference data refreshes
- Notification of security-relevant updates

5. Updates and releases

Point releases (0.1.x): Bug fixes and minor improvements. Delivered as a new installer available from the same download location.

Minor releases (0.x.0): New features. May require a license update if network policy or engine version changes.

Reference data updates: The bundled MANE reference and any future ClinVar/gnomAD bundles are versioned. Updates ship with point releases.

Customers are responsible for installing updates. We notify licensed customers by email when a security-relevant update is available.

6. Uptime

GenomicsOps is a **desktop application**. It runs on the customer's machine and does not depend on any service we operate. There is no uptime commitment because there is no hosted service.

The offline license activation model means a network outage, license server failure, or our business interruption **cannot** prevent a licensed copy from running.

7. Data handling

- We do not have access to any customer data.
- All sample data, variants, and reports stay on the customer's machine.
- If a customer shares logs or files with us for support, we retain them only for the duration of the support case and delete on request.

8. Security

- Security vulnerabilities should be reported to security@genomicsops.io.
- We acknowledge security reports within 3 business days.

- We aim to provide a remediation timeline within 10 business days.
- Customers are notified by email of confirmed vulnerabilities that affect their installed version.

9. Limitation of liability

GenomicsOps is **Research Use Only**. It is not intended for clinical diagnosis, treatment, or patient management. See the LICENSE file in the repository for the full liability terms.

Support obligations do not include:

- Recovering data from a corrupted local SQLite database
- Reconstructing analysis results from logs
- Restoring access to reference databases the customer deleted

10. Term and termination

Support is included with an active commercial license. Support ends 30 days after license expiry. Grace-period installs continue to run but are not covered by support response targets.

11. Changes

This SLA may be updated for new license terms. Customers are notified of material changes by email at least 30 days in advance.
